Creating and Managing Student E-Portfolios with Padlet
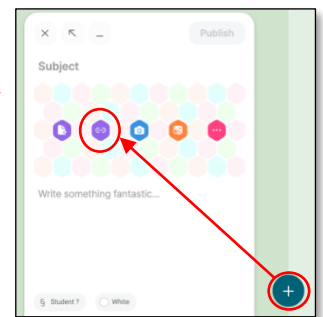

Create a Class Padlet to efficiently capture learning as you teach

1. Create a **Wall** Padlet for your class (see our guide on *How to Set Up a Collaborative Learning Wall using Padlet*)
2. Create a **section** for each student
3. This is where you will add **posts** to capture evidence of student learning e.g., pictures of pieces of work, videos, audio recordings, links to online work
Create Individual Student Padlets to store all evidence of learning

1. Create a separate individual **Wall** Padlet for each of your students
2. **Title** these Padlets with each Student's Name
3. Go back to the Class Padlet and add a post to each section to link each Individual Student Padlet into the Class Padlet
Populate the Individual Student Padlets to Store and/or Showcase

1. **Duplicate** posts from the Class Padlet to the Individual Student Padlets
2. Go back to the Individual Student Padlet to position this duplicated post correctly

Create student Showcase Padlets

1. Click and drag the posts you want to showcase to the top of the section
2. Click the Open Slideshow button to automatically create a slideshow presentation showcasing all the students work

Tip: Make it user-friendly, easy to navigate

- Create a **Bookmark Folder** in the **Dashboard** to organise all the work relevant for each class in one place
